

# CG 10 AND MEERKAT JIBS

JIB ARMS

#### WHITES SPECIALTY EQUIPMENT

The CG 10 is a light-weight jib arm that has been designed for maximum rigidity and ease of use. The quick-release boom sections allow for speedy set-ups, a variety of boom lengths and convenient transportation. This jib arm fits standard tripods,

bazookas or dollies. It has an over and under-slung Mitchell plate as well as 100mm and 150mm bowl adaptors. Standard barbell weights can be used for counter-weights.

The Meerkat is a mini jib for a full complement camera, zoom lens and mattebox. It has been designed with maximum rigidity and optimum action for its size and weight. Making use of a quick action sliding counter weight arm makes for quick set-ups, which when retracted makes for easy transportation in a car trunk. This jib arm fits on top of standard heavy tripods, bazookas, dollies or tracking vehicles and accepts any conventional or nodal fluid head. These can be mounted in either upright or inverted mode to the 150mm bowl or Mitchell plate front offset fitting.

## CG 10 Quick Specs

		Fulcrum to	
	Length	Counter Weight	Payload
Mode 1	4ft	3.3ft	100lbs
Mode 2	7ft	3.75ft	98lbs
Mode 3	8ft	3.75ft	83lbs
Mode 4	10ft	3.75ft	44lbs

#### Meerkat Quick Specs
